DETAILED ACTION

Claim 7 is rejected under 35 U.S.C. 112, first paragraph, as failing to comply with the written description requirement. The claim(s) contains subject matter which was not described in the specification in such a way as to reasonably convey to one skilled in the relevant art that the inventor(s), at the time the application was filed, had possession of the claimed invention. Claim 7 discloses that an anti-angiogenic substance covalently linked to the fatty acid.

Claim Rejections - 35 USC § 103

The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

Claims 1,3 are rejected under 35 U.S.C. 103(a) as being unpatentable over Yanai et al (Pharmaceutical Research, 1995, 12 no. 5, 653-7) and Kokura et al (Cancer Research, 1997, 57 no. 11, 2200-2). Yanai teaches a method of treating a tumor comprising an intra-arterial injection of an angiogenesis inhibitor (TNP-470). See abstract. Yanai does not teach the method comprising polyunsaturated fatty acid such as alpha-linolenic acid or oleic acid. However, Kokura teaches a method of treating a tumor comprising an intra-arterial injection of alpha-linolenic acid. See abstract. It would have been obvious to modify the invention of Yanai to include the alpha-linolenic acid taught by Kokura. One would have been motivated to do this in order to enhance the treatment of the tumor.

Objection to Specification

35 U.S.C. 112, first paragraph, requires the specification to be written in "full, clear, concise, and exact terms." The specification is replete with terms which are not clear, concise and exact. The specification should be revised carefully in order to comply with 35 U.S.C. 112, first paragraph. Examples of some unclear, inexact or verbose terms used in the specification are: All occurrences of Trade Marks: Angiostatin and Endostatin must be capitalized – ANGIOSTATIN and ENDOSTATIN. With the numerous occurrences Examiner Suggest the submission of a substitute specification.

A substitute specification for the claims is required pursuant to 37 CFR 1.125(a) because numerous occurrences of Trade Marks in the specification are not proper: Trade Marks Angiostatin and Endostatin must be capitalized – ANGIOSTATIN and ENDOSTATIN.

A substitute specification must not contain new matter. The substitute specification must be submitted with markings showing all the changes relative to the immediate prior version of the specification of record. The text of any added subject matter must be shown by underlining the added text. The text of any deleted matter must be shown by strike-through except that double brackets placed before and after the deleted characters may be used to show deletion of five or fewer consecutive characters. The text of any deleted subject matter must be shown by being placed within double brackets if strike-through cannot be easily perceived. An accompanying clean version (without markings) and a statement that the substitute specification

contains no new matter must also be supplied. Numbering the paragraphs of the specification of record is not considered a change that must be shown.

Claim Objection / Allowable Subject Matter

Claims 2 and 4 are objected to as being dependent upon a rejected base claim, but would be allowable if rewritten in independent form including all of the limitations of the base claim and any intervening claims. Claims 5-7 are allowable. The prior art does teach or suggest the instant method comprising lithium salt of the polyunsaturated fatty acid.
